Blitzwolf BW-Vision A1 Projector

The Blitzwolf BW-Vision A1 projector is a compact device designed for everyday movie and online content viewing, combining Android 13, 4K support, and enhanced brightness and contrast. The model offers a native resolution of 720p, 200 ANSI lumens of brightness, and extensive image adjustment options, allowing you to adapt the projection to various conditions. Thanks to built-in apps and wireless connectivity, the projector can operate independently without the need to connect additional devices.

Clear image and improved brightness

The projector delivers native 720p HD resolution with 4K content decoding support, providing a more detailed image than basic models. A brightness of 200 ANSI lumens results in a clearer image, even in less dimly lit rooms. High light transmission of 94% improves clarity, while increased brightness and contrast result in better detail reproduction. As a result, the image is crisp and more natural

when watching movies or presentations. The Vivid Colors technology used delivers more intense and saturated colors. A contrast ratio of 2000:1 allows for clear distinctions between light and dark scenes, which improves image perception. This makes content look more realistic and pleasing to the eye. This is particularly noticeable when watching movies and high-quality content.

Flexible adjustment and quick setup

The projector is designed for quick and convenient setup. Automatic vertical correction corrects image distortion, making it easier to position the device in various locations. Manual focus adjustment allows you to tailor the image to your preferences, and the 50–100% zoom range gives you greater control over the projection size. Additionally, the 30° rotation capability increases setup flexibility in non-standard spaces.

Android System and App Access

The built-in Android 13 system allows you to use apps directly from the projector. You have access to platforms such as YouTube and Prime Video, and can also install additional apps via Google Play. This allows the projector to function as a standalone entertainment hub, without the need to connect a laptop or smartphone.

Stable connectivity and fast performance

The projector supports Wi-Fi 6 and Bluetooth 5.4, ensuring a stable connection and smooth data transfer. This allows you to wirelessly stream content from your phone or other devices without delays. The powerful Amlogic T950S processor, along with 1GB of RAM and 8GB of ROM, ensures smooth operation of the system and apps. In practice, this translates to a comfortable user experience without any lag.

Extensive connectivity options

The BlitzWolf BW-Vision A1 offers both wireless and wired connections, increasing its versatility. Available HDMI, USB, and AV ports allow you to connect various devices, such as a laptop, game console, or USB flash drive. At the same time, the ability to wirelessly stream video helps reduce the number of cables. This makes it easy to adapt the projector to various usage scenarios.
