Ultimea Poseidon M60 BOOM Soundbar

The Ultimea Poseidon M60 BOOM is a 5.1 soundbar with Dolby Atmos, designed to easily immerse you in the action of a movie, TV series, or game. Five built-in drivers in the soundbar and a dedicated 5.25" subwoofer create a full, spacious sound with clear dialogue, spatial effects, and powerful bass. The whole thing is powered by a 340 W peak power system that easily fills the room with sound.

Dolby Atmos - sound that surrounds you from every side

Dolby Atmos support allows you to enjoy a realistic, cinematic experience without complicated installation. The sound not only comes from the front, but also creates a sense of space around the viewer, increasing immersion in movies, TV shows, and games. This solution makes action scenes more dynamic and quiet moments more natural and engaging.

Five drivers in one enclosure - simple and cable-free

The soundbar is equipped with five wideband drivers. This gives you 5.1 surround sound without the need for additional satellite speakers and cables running throughout the room. It's a convenient solution for those who want better sound without compromising on aesthetics.

Deep bass

The set includes a subwoofer with a 5.25" driver, designed for intense yet controlled bass. BassMX™ technology combines an enlarged subwoofer enclosure with a 16 mm diaphragm excursion to generate deep, dynamic low frequencies without losing clarity. This gives the bass a clear punch and energy, but it doesn't dominate the dialogue or effects — it works well for both action scenes in movies and music listening.

Clear dialogue in every scene

The VoiceMX™ feature was designed to improve speech intelligibility. The system amplifies the range responsible for dialogue (300 Hz – 3 kHz), making conversations clearer even with loud effects, dynamic music, or lower volume levels. This is a real benefit when watching movies, series, and TV shows.

Computing power that works in the background

A triple-core DSP (Triple-Core DSP), consisting of three 32-bit units, is responsible for sound processing. The system analyzes the signal in real time, decodes Dolby Atmos, and fine-tunes the sound depending on the selected mode. The result? Stable, clear, and consistent sound in every situation.

Match the sound to what you're watching

The soundbar offers six listening modes: Movie, Music, Voice, Sports, Game, and Night. Each is designed to emphasize different elements of the sound, from dialogue to dynamic effects.

HDMI eARC - maximum quality, minimum settings

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The HDMI eARC port allows you to transfer lossless audio directly from your TV to the soundbar – without compression or loss of detail. In practice, this means a bandwidth of up to 37 Mbps, while standard HDMI ARC offers a maximum of 1 Mbps. This difference allows you to take full advantage of the Dolby Atmos format and achieve significantly better dynamics and sound detail. In addition, CEC support allows you to control the soundbar with your TV remote control, which greatly simplifies everyday use.

Bluetooth 5.4 - fast and stable connection

The Bluetooth 5.4 standard ensures a stable connection, low latency, and smooth synchronization of image and sound. This makes the soundbar ideal not only for TV, but also as a speaker for music, movies, and games played from your phone or tablet.

Full control from the app

The Utimea App allows you to manage your sound settings directly from your phone. You can adjust the equalizer, select listening modes, personalize the sound, and update the device's software to tailor the soundbar to your preferences.

Included:

- Soundbar
- Subwoofer
- Power adapter
- Remote control (IR)
- HDMI cable
- Wall mounts x2
- Wall mounting kit
- Speaker mounting screws
