EMEET Piko Webcam (Black)

The EMEET Piko is a compact webcam equipped with a dual-lens system, a 1/2.8" Sony sensor, and UHD 4K video quality. It supports AI-powered autofocus, intelligent light correction, and audio recording via three noise-canceling microphones. This makes it ideal for video calls, recordings, and live streams. The camera operates in plug-and-play mode, so it's ready to use immediately after connecting to your computer. Its compact housing and distinctive design mean it not only takes up minimal desk space but also fits seamlessly into a modern workspace or streaming setup.

Detailed and clear image

The camera uses two lenses—one captures 4K video, while the other assists with focusing and exposure. This ensures the image remains clear even during movement, and the user's face is well-lit and rendered naturally. The Sony sensor improves image quality in challenging lighting conditions, resulting in greater detail clarity and better colors without the need for additional lighting.

Clear sound without extra equipment

The built-in three-microphone array captures voice accurately and reduces ambient noise, making conversations easier to understand. The camera offers three audio modes that can be adjusted to suit different situations—from natural sound to stronger noise reduction. In practice, this means you don't need to use an additional microphone to achieve good sound quality during meetings or recordings.

Adaptability to various work scenarios

The camera supports both portrait and landscape modes, making it easier to prepare content for various platforms. Combined with the EMEET STUDIO software, you can manage image settings, switch between cameras, and configure shortcuts for quick operation. The multi-device functionality also allows you to combine video and audio from different sources, expanding your options during broadcasts.

Easy to use and widely compatible

The EMEET Piko operates in plug-and-play mode, so it does not require driver installation. It is compatible with Windows, macOS, and Linux systems and works with popular platforms such as Zoom, OBS, YouTube, Twitch, and Teams. This makes it suitable for both work and content creation.

Included

- webcam
- USB-C to USB-C cable
- USB-C to USB-A adapter
- mount
- user manual
