NAVEE E25 Pro electric scooter

The NAVEE E25 Pro electric scooter combines a dynamic motor with up to 480 W of power, a maximum speed of 20 km/h, and a range of up to 25 km, making it ideal for urban commuting. Comfort is ensured by front suspension and maintenance-free tires with a special design that effectively absorb road surface irregularities. Safety is enhanced by a dual braking system with front EABS and rear drum brakes, while the smart features available in the NAVEE app allow for better control of riding parameters. The whole thing is complemented by a lightweight, foldable design with a clear display and water resistance, making the scooter ready for the daily challenges of urban mobility.

Dynamic riding and optimal range

The NAVEE E25 Pro is designed for efficient urban travel. The motor with a maximum power of 480 W ensures smooth acceleration and stable riding at speeds of up to 20 km/h, allowing you to quickly get to work, school, or a meeting in the city center. With a range of up to 25 kilometers, the scooter

is perfect for everyday commuting without the need for frequent charging. The design can also handle more demanding sections of the route - the maximum uphill gradient of 14% allows you to efficiently overcome city hills, bridges or steep streets, while maintaining stability and riding comfort.

Riding comfort thanks to front suspension

City roads can surprise you with uneven surfaces – from cobblestones to unexpected potholes. That's why the NAVEE E25 Pro is equipped with front suspension that effectively absorbs shocks while riding. This makes your daily commute much smoother and less tiring. The advanced suspension design ensures that even the most difficult sections of the route do not interfere with the comfort of riding the scooter. Riding on uneven asphalt or cobbled streets becomes stable, allowing you to enjoy full control over the vehicle.

Stability on any surface

The scooter is equipped with 8.5-inch maintenance-free tires with an innovative internal design. Their special construction effectively absorbs shocks, which further increases riding comfort on city streets and less even surfaces. The use of this technology also eliminates the need for regular maintenance or tire inflation. This means greater reliability and convenience of use – you can simply get on the scooter and hit the road without any additional preparation.

Precise braking system for full control

The NAVEE E25 Pro uses a dual braking system consisting of a front EABS electronic brake and a rear drum brake. This combination ensures fast and stable stopping of the scooter in various road conditions. The braking system guarantees smooth and controlled braking both on crowded streets and when riding on steeper sections of the route. This gives you greater confidence and safety during your daily commute.

Smart features and intuitive app

The scooter works with the NAVEE app, which expands the vehicle's management capabilities. With it, you can use features such as an automatically sensor-controlled headlight, energy recovery while

riding, and an electronic scooter lock. The app also allows you to monitor your riding parameters and adjust the scooter settings to your preferences, making every trip even more comfortable and tailored to your style.

Clear display and ergonomic design

Every element of the scooter has been designed with user comfort in mind. The 140 mm wide platform ensures a stable position while riding, increasing comfort and a sense of security. The intuitive power button allows you to quickly start the scooter with a single click. The handlebars feature a clear LED display that keeps you informed of the most important riding parameters. This allows you to easily control the speed, operating mode, and status of the scooter while moving around the city.

Lightweight and foldable design ideal for the city

The NAVEE E25 Pro is designed for everyday use in a dynamic urban environment. The scooter weighs approximately 15.9 kg, making it easy to carry when needed. The quick-folding mechanism allows you to fold the vehicle in a few moments and conveniently take it with you on public transport, to the office, or to your home.

Weather resistance and battery protection

Daily use of a scooter often means exposure to various weather conditions. The IPX5 waterproof certification provides protection against splashes and light rain, so you can use the vehicle for most of your urban journeys without worry. The safety and durability of the battery is ensured by the Smart BMS intelligent battery management system, which uses a six-stage protection mechanism. This protects the cells against short circuits, excessive current, bidirectional protection against overcharging and excessive discharge, temperature control, and automatic sleep mode when the voltage is too low. Such comprehensive protection translates into a longer battery life and stable operation of the scooter for a long time.
