

Mileseey IONJET2 Hunting Binoculars

Model: IONJET2

Manufacturer: MILESEY

EAN: 6971915323055

Product Code: 875177

R4,924

Mileseey IONJET2 Hunting Binoculars

Hunting requires not only experience but also equipment that can keep up with every situation in the field. The Mileseey IONJET2 binoculars combine an impressive measurement range of up to approx. 1,829 m, high accuracy of ± 0.46 m, and excellent image quality, allowing you to operate with confidence even in demanding conditions. The model offers several measurement and target tracking modes, special features for archery, a clear dual OLED display, and a dual power system that helps avoid unpleasant surprises in the field. The package is rounded out by a lightweight, durable, and waterproof design with thoughtful details that ensure comfort on every outing.

Range and accuracy that make a difference

The IONJET2 was designed for users who demand maximum measurement reliability. The device offers a range of up to approximately 1,829 m, providing great freedom of operation in open spaces and when observing targets at significant distances. Also noteworthy is the very high precision of

± 0.46 m, which allows you to better assess distance and make more accurate decisions. These parameters are of great importance, especially when reaction speed and the accuracy of every shot matter.

Designed for hunting

One of the greatest strengths of this model is the proprietary BOWC (Bow Compensation™) technology. This solution was developed to account for additional compensation of the arrow's flight path, resulting in more precise measurements than with traditional laser rangefinders. In practice, this means an even better alignment of the measurement with the shooting conditions, and thus greater control over the situation. For those engaged in bow hunting, this feature will significantly enhance operational effectiveness.

Versatility even in challenging conditions

The Mileseey IONJET2 offers great flexibility when targeting, featuring 3 measurement modes and 4 target modes. You have access to LOS, ARCH, and HD modes, which allow you to tailor the device's operation to a specific scenario. These are complemented by Best, Auto, First, and Last target modes, enabling the rangefinder to perform better in both simple and more complex terrain conditions. This configuration ensures the device can be effectively used in a variety of situations, regardless of the nature of the hunt or the type of environment.

An image that helps you see more

A refined optical system, the result of over 15 years of the brand's experience in optics, ensures comfortable observation. The use of HD lenses with protective coatings translates into a clear, detailed image and naturally rendered details, which is of great importance when observing the terrain and quickly identifying a target. A 7.5° FOV and 90% light transmission further enhance image quality, ensuring a bright and clear view. It is thanks to these parameters that the IONJET2 offers the refined visual experience expected of a modern hunting binocular with rangefinding capabilities.

Clear readout even in low light

The IONJET2 is equipped with a dual OLED display in red and black, which significantly improves the readability of the displayed data. Classic black indicators can blend into a dark background, so this model features a solution that enhances the visibility of information in various lighting conditions. As a result, the display remains clear even in low light, at dawn, at dusk, or in dark surroundings. This practical feature is crucial in moments when time is of the essence and there is no room for error.

Power You Can Rely On

During hunting, a reliable power supply is just as important as the measurement itself, which is why the IONJET2 uses a dual power system. The built-in 450 mAh battery supports USB-C charging and allows for up to 5,000 measurements on a single charge. An additional safeguard is the CR2 backup battery, which provides up to 10,000 measurements, giving you even greater peace of mind during longer expeditions. This combination significantly reduces the risk of the device failing at a critical moment.

Quiet operation and practical ease of use

When hunting, every detail matters, which is why the IONJET2's operation has been designed to be simple, fast, and as discreet as possible. The instantaneous and silent measurement process helps avoid unnecessary noise that could scare off game. Comfort is also enhanced by the ergonomic design and the adjustable eyecup, which can be adjusted to the optimal exit pupil distance. This makes the device comfortable for both people who do not wear glasses and those who use them daily.

Durable construction ready for rough terrain

The IONJET2 combines a lightweight design with solid construction, utilizing a high-quality metal alloy in the housing, which translates to excellent impact resistance. The device is fully waterproof and equipped with anti-fog lenses, so you can rely on it even when the weather isn't cooperating. Also noteworthy is the magnetic design, which allows for quick attachment of the device to a metal clip, making storage and transport easier. It is a practical, well-designed companion for outdoor adventures, created to meet the challenges of hunting.

Manufacturer	Mileseey
Model	IONJET2
Maximum measurement range	up to approx. 1,829 m
Measurement accuracy	±0.46 m
Field of view	7.5° FOV
Light transmission	90%
Distance measurement modes	3
Available measurement modes	LOS, ARCH, HD
Target modes	4
Available target modes	Best, Auto, First, Last
Compensation technology	BOWC (Bow Compensation™)
Application of BOWC technology	additional compensation for arrow trajectory
Display type	OLED
Display colors	red and black
Optical system	coated HD lenses
Battery	Built-in 450 mAh
Charging	USB-C
Number of measurements per battery charge	up to 5,000
Backup battery	CR2
Number of measurements per CR2 battery	up to 10,000
Housing	metal alloy

Water resistance	Yes
-------------------------	-----
