EJEAS K1Pro motorcycle intercom with recorder

Riding a motorcycle together takes on a whole new dimension when communication, safety, and route recording work as one cohesive system. The EJEAS K1 Pro intercom allows you to talk to your group, listen to music and navigation messages, and document every kilometer in high resolution. Advanced Mesh technology maintains a stable connection even in challenging terrain, and a powerful battery supports long trips without worrying about range or operating time. The intuitive mobile app provides live image preview and quick recording management. This solution is designed for motorcyclists who want to ride in a group, safely and with full control over communication.

Mesh 3.0 - stable communication in difficult conditions

Communication is handled by Mesh 3.0 technology, designed for motorcyclists traveling in varied terrain. Enhanced signal penetration and twice the connection strength allow you to stay in touch in tunnels, on winding roads, among hills, or in heavy traffic. In open environments, the intercom range exceeds 1,000 meters, and in more difficult conditions it is approximately 500 meters, which in practice allows for free communication in most riding scenarios. The system supports simultaneous conversations between up to eight motorcyclists on the same channel, allowing the entire group to exchange information in real time.

Multitasking audio and full call control

The use of a dual integrated circuit allows for the simultaneous use of several audio sources without loss of quality. During an intercom conversation, you can simultaneously listen to music or FM radio, and even share the songs you are playing with your riding companions. The system allows you to switch channels, adjust the microphone sensitivity in five levels, and quickly mute it, allowing you to tailor the intercom's performance to road conditions and your preferences. The built-in Bluetooth 5.1 module connects the device to your smartphone, allowing you to control music, listen to navigation messages, automatically answer calls, and activate your phone's voice assistant.

2K camera and documentation of each route

The device also functions as a driving recorder, integrating a 2K video and 12 MP photo camera directly into the helmet intercom. Recordings are made in real time while driving, and the image can be viewed simultaneously in the mobile app. The footage can be easily exported and shared on social media or sent to friends, preserving the most interesting moments of your trips. In the event of a collision, the app automatically secures the recording and saves the exposure settings, protecting key evidence of the incident.

Long battery life and performance

The 2100 mAh battery has been optimized for group communication and recording modes. The intercom itself can operate continuously for up to 17 hours, while simultaneous communication and video recording are possible for approximately 5.5 hours. These parameters allow for all-day group rides and multi-hour trips without the need for frequent charging. Operational stability is supported by a dual-chip electronic architecture that separates communication and multimedia tasks,

maintaining smooth system operation.

Roadcam app

The dedicated Roadcam app for iOS and Android expands the intercom's functionality with Wi-Fi management of recordings and settings. It allows you to view live images, remotely browse, download, and play files, as well as quickly share content with other users. The app acts as a control center for the device, allowing you to customize the recorder's operation and manage recorded routes directly from your smartphone.

Included in the set

- intercom
- clip
- USB-C charging cable
- 4 x Velcro strips
- headset
- Allen key
- user manual

Manufacturer	EJEAS
Model	K1Pro
Communication technology	Mesh 3.0
Bluetooth version	5.1
Maximum number of users in intercom	8 people (simultaneously)
Intercom range	up to 1000 m (open terrain), approx. 500 m (built-up area)
Audio functions	group intercom, music playback, FM radio, music sharing, navigation support, automatic call answering, voice assistant
Microphone sensitivity	adjustable, 5 levels
Microphone mute function	yes

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice.
