

Mileseey S7 Laser Rangefinder with 100m Camera

Model: S7Mil2

Manufacturer: MILESEEEY

EAN: 6971915322126

Product Code: 877574

R4,224

Mileseey S7 Laser Rangefinder with 100m Display

Field work requires equipment you can rely on without unnecessary adjustments or guesswork. The Mileseey S7 Laser Rangefinder with 100m Display was designed for accurate measurements at longer distances, convenient operation in various conditions, and efficient data management. It offers a range of up to 100 meters, high precision, a digital viewfinder with 2x magnification, Point-to-Point technology, 16 measurement modes, and a clear backlit IPS screen. All this is complemented by a rugged IP65-rated design, app connectivity, and features that significantly simplify daily work on construction sites, during inventory, or when planning spaces.

Accurate measurement even at long distances

The Mileseey S7 model allows you to measure distances up to 100 m while maintaining an accuracy of $\pm 1/16"$, making it ideal wherever reliable, repeatable results matter. This tool is designed for professionals who need reliable measurements on every job, whether they're working indoors or outdoors. The long range combined with high precision provides greater freedom of movement and allows you to move more quickly from measurement to the next stages of work.

Precise aiming thanks to the digital viewfinder

When taking measurements at longer distances, ease of aiming is of the utmost importance. The built-in digital viewfinder with 2x zoom makes it easier to precisely target a point, providing a clearer and more stable view of the target. This practical solution is particularly useful outdoors and wherever a standard laser dot may be harder to see. The result is greater control over the measurement and the assurance that the result corresponds to actual working conditions.

Advanced P2P Technology

The Mileseey S7 utilizes Point-to-Point technology, which allows for measuring the distance between any two points from a single position. This feature is extremely useful for more advanced measurement tasks, spatial layout planning, or projects requiring greater flexibility than standard linear measurement. As a result, the device better meets the needs of professionals who expect both speed and expanded field capabilities.

As many as 16 measurement modes

Versatility is one of this model's greatest strengths. You have access to as many as 16 measurement modes, allowing you to easily adapt the device's operation to a specific task. Whether it's a quick distance measurement, more complex calculations, or work related to interior and facility planning, the rangefinder helps you work efficiently and precisely. The well-thought-out design further supports intuitive operation, making the device comfortable to use for both experienced professionals and beginners.

Clear IPS screen and refined display system

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The device is equipped with a large, 2.4-inch backlit IPS screen that provides a bright, clear image and good readability in various lighting conditions. The large display area makes it easy to read results and navigate the device’s functions, which is especially important during intensive work. An additional advantage is the screen’s automatic rotation between portrait and landscape orientations, ensuring that information remains legible regardless of how the rangefinder is held. The device also features a monochrome text mode, which improves user comfort both during the day and after dark.

App connectivity and improved data organization

The Mileseey S7 supports smart connectivity with a mobile app, enabling real-time data synchronization and convenient management of measurement results. The device allows you to save up to 1,000 records, which significantly facilitates the archiving and subsequent analysis of collected data. The app also provides access to practical tools that support work organization. You can overlay measurements directly onto photos taken on-site, which streamlines communication and planning, as well as create simple floor plans based on the collected data. This solution fits well with modern workflows, where both the measurement itself and the rapid practical application of information are crucial.

Ready for use in various scenarios

The rugged design with an IP65 rating effectively protects the device from water, dust, and contaminants, making the distance meter well-suited for demanding work environments. This durability translates to greater peace of mind when using it on a construction site, in a workshop, or during outdoor measurements. Also noteworthy are the two power options (via USB-C port or using rechargeable batteries), which allow you to conveniently adapt the device to the situation. In practice, this means greater flexibility, less downtime, and a tool that’s ready to go when you need it.

Manufacturer	Mileseey
Model	S7Mil
Measurement range	0.2 m to 100 m

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

itworkup.co.za | sales@itworkup.co.za | +27 (11)541-9950

Measurement accuracy	± 1/16" (± 2 mm)
Laser parameters	630 nm – 670 nm, 1 mW, Class II
Units	m / ft / in / ft+in
Orientation	Top/Tripod/Rear
Outdoor measurement	Yes
Point-to-point (P2P) measurement	Yes
Measurement modes	Single / Continuous / Pythagoras / Area / Volume
Special measurement functions	Triangle area / Trapezoid area / Cylinder volume / Automatic leveling / Automatic height determination / Staking out
Bluetooth	Yes
Display	2.4-inch color display (with screen rotation)
Memory	1,000 sets
Battery type	3 AAA NiMH rechargeable batteries
Water resistance	IP65 protection rating
Dimensions (mm)	120 × 56.5 × 28 mm
Product weight	180 g
