IsEasy LI2V-22 dual zone induction stove

The IsEasy LI2V-22 induction stove is perfect for any kitchen. With two heating zones of up to 2,000 watts (each), food preparation becomes fast and convenient. The sleek glass finish gives the stove a stylish look that matches your kitchen interior. In addition, the touch panel will allow you to adjust the cooking parameters to suit your needs. A timer function (99 minutes) is also available.

Efficient and fast cooking

With heating zones ranging from 1800 to 2000 watts, the IsEasy LI2V-22 stove allows you to cook two different dishes at the same time. Induction works on the principle of rapid heating of dishes with the help of a magnetic field, which significantly reduces cooking time compared to traditional electric or gas stoves. The maximum power rating of the device is 3,400 watts, which means that both zones can operate at high power simultaneously without a drop in performance.

Simple controls and convenience of use

The IsEasy LI2V-22 stove is equipped with an intuitive touch panel for convenient operation of the device. With 9 power levels, you can precisely adjust the heating intensity to suit different needs. High-heat frying, reheating, or quickly boiling water - all this is possible thanks to the wide power range. An added bonus is the timer function, which allows you to program a cooking time of up to 99 minutes. This allows you to get on with other activities without worrying about burning your food.

Safety first

The IsEasy LI2V-22 induction stove takes care of user safety on several levels. A child lock prevents the youngest household members from accidentally turning the appliance on, which is especially important in families with children. The automatic shut-off function protects against overheating of the stove by turning it off when needed.

Quiet operation and easy cleaning

The IsEasy LI2V-22 generates a low noise level during operation. Thanks to its 9-blade fan, the device efficiently dissipates heat, making cooking less strenuous, especially in small spaces. In addition, the glass surface of the stove is very easy to clean. Just wipe it with a soft, damp cloth to remove any dirt.

Compact size and versatility

Thanks to its compact design, the stove will easily fit into smaller kitchens. With an optimal diameter of 12 to 26 cm, the stove works with most standard pots and pans. It is worth remembering that the device works only with cast iron, enamel and stainless steel cookware. Do not use ceramic, glass or aluminum cookware, as they are not compatible with induction.
