IsEasy LI5-01 five-zone induction cooktop

IsEasy LI5-01 is a modern induction cooktop equipped with five heating zones that offers efficiency, functionality and aesthetic design. It is the ideal solution for demanding users who value precision cooking and innovative technologies that save time and energy.

Five heating zones for maximum versatility

The cooktop offers five heating zones with different wattages and sizes. Thanks to the Boost function, each provides more intense heating when needed. For example, a 1200-watt zone can output 1500 watts in a short period of time, while the 1800-watt zone can output 2000 watts. This practical solution will satisfy all your cooking needs. Variable sizes allow you to use a variety of cookware, from small saucepans to large pots - a versatile hob for any kitchen.

Precise touch control

The touch-to-slide control panel makes it easy to adjust the power on nine levels, ensuring the perfect temperature match for your cooking needs. The digital display and intuitive icons make operation quick and convenient, even for those unfamiliar with technology.

Timer and safe use

A timer function with a setting of up to 99 minutes allows you to control the cooking time, which eliminates the risk of burning food. In addition, the appliance is equipped with a parental lock, automatic shut-off and residual heat indicator, ensuring maximum safety for the whole family.

Efficient cooling and quiet operation

An advanced heat dissipation system with five fans makes the appliance cool quickly and operate extremely quietly. This allows you to cook without disturbing your daily home atmosphere.

Easy maintenance and durability

The hob's surface made of high-quality ceramic glass is scratch- and spill-resistant. Its smooth texture allows for easy cleaning - just wipe it with a damp cloth to keep it looking like new.

Compatibility with different types of cookware

The LI5-01 hob is compatible with different types of cookware, such as stainless steel, cast iron, enamel and ceramic. The cookware detection function automatically detects the presence of cookware. This is a convenient and practical solution that does not require the purchase of additional equipment for the kitchen.
