JMGO N1S Nano Projector

An evening movie night on the living room wall, a spontaneous movie marathon on the go, or maybe a quick gaming session on the big screen? The compact JMGO N1S Nano projector offers 1080p Full HD resolution, smooth 120 Hz refresh rates, and access to Google TV with Netflix built-in. The 460 ISO lumens of brightness ensure a clear image in darkened rooms, while advanced automation ensures perfect setup with no effort. Add to that Dolby Audio surround sound, intuitive voice control, and a gimbal design that lets you project the image at virtually any angle. It's a device that adapts to your viewing style, wherever you are.

A Full HD image that surprises

The displayed image impresses with its detail and natural color reproduction thanks to 1080p Full HD resolution and HDR10 support. A 400:1 contrast ratio captures details in both bright and dark scenes, which you'll especially appreciate when watching movies and TV shows. The projector handles screens up to 200 inches in size, allowing you to easily turn any room into a private cinema.

With 460 ISO lumens of brightness, the device works best in the evening or in dark rooms, offering a comfortable viewing experience without compromising quality.

Google TV and complete entertainment freedom

With the N1S Nano projector, access to content is instant and incredibly convenient. The built-in Google TV system allows you to quickly switch between apps like Netflix, Prime Video, and YouTube without needing to connect additional devices. Voice control via Google Assistant lets you search for movies, control playback, and manage settings without reaching for the remote. This solution simplifies daily use and lets you focus solely on entertainment.

An image on your terms

Every time you start a projection, the device automatically adjusts the image to the current conditions. Keystone correction eliminates distortion, and autofocus instantly adjusts the focus, regardless of where the projector is positioned. The Smart Eye Protection feature safeguards your eyes by automatically reducing brightness when someone approaches the lens. This intelligent support lets you enjoy the image without manual configuration.

Built for gaming

The HDMI 2.1 (ARC) port and support for 1080p at 120 Hz ensure a smooth, responsive image while playing video games. Low latency and stable Wi-Fi 5 and Bluetooth 5.1 connections ensure a comfortable, interruption-free gaming experience. This is a projector that performs equally well in both home theater and gaming environments.

Sound that fills the room

The immersive experience is delivered by built-in 2 × 5 W speakers with Dolby Audio certification. They produce clear, dynamic sound enriched with deep bass, so you don't need to immediately reach for additional speakers. Whether you're watching a movie, listening to music, or gaming, the sound remains consistent and well-balanced.

Flexible positioning and excellent portability

The dual-axis gimbal design lets you position the image exactly where you want it—up to 127° vertically and a full 360° horizontally. The integrated handle and compact EPP housing make the projector extremely lightweight yet durable. Weighing approximately 2 kg, it’s the perfect travel companion, and the ability to power it from power banks gives you complete freedom from power outlets, which is ideal for outdoor screenings.

Quiet operation and longevity

Operating at less than 26 dB means the device remains virtually inaudible during screenings. The LED technology used in the projector lamp translates to energy efficiency, but also to an impressive lifespan of up to 30,000 hours. It’s an investment in entertainment that will stay with you for years, without the need for frequent light source replacement.

Included

- projector
- remote control
- power adapter
- 2 AAA batteries
- Allen wrench
- user manual

Manufacturer	JMGO
Model	N1S Nano
Weight	1.8 kg
