

Thrustmaster T.Flight Full Kit X Black USB Joystick Analogue / Digital PC, Xbox

Model: 4460211

Manufacturer: THRUSTMASTER

EAN: 3362934403089

Product Code: 930264

R4,658

UNDER THE HOOD

ALL-IN-ONE, COMPACT SOLUTION FOR COMPLETE IMMERSION

The first plug-and-play joystick for Xbox One, T.Flight Hotas One is also compatible with the next-generation Xbox Series X|S consoles.

With its ergonomic, realistic design inspired by aircraft flight control systems, this joystick allows for an incredible level of immersion on Xbox consoles.

PRECISE, VERSATILE AND SMOOTH RUDDER

Specific advanced features for an optimized flight experience. The very first rudder pedals to feature the S.M.A.R.T (Sliding Motion Advanced Rail Track) slide rails system: a technological marvel with 4 slide rails crafted of industrial-grade aluminum for incredibly smooth sliding motion; a self-centering rudder axis, for the perfect balance between smoothness and resistance; and a long range of travel on the rudder axis, for precise maneuvers.

COMPACT AND PRACTICAL

T.Flight Hotas One is detachable and can be positioned in either of two different ways:
– With the throttle detached and separated from the joystick (to recreate authentic piloting conditions); or
– With the throttle attached to the joystick (for greater stability and to take up less space).

REALISTIC, ERGONOMIC JOYSTICK

In real life, the flight controls used by pilots include a stick and a throttle: this combination is extremely effective in terms of performance and precision.
The life-size throttle included with the T.Flight Hotas One lets you easily control the acceleration of your aircraft (or other vehicles) in games.

A JOYSTICK FOR ALL TYPES OF FLIGHT

The joystick’s realistic, ergonomic design is well-suited to all types of flight. The wide hand-rest helps gamers keep their hand in a very stable and relaxed position, allowing the stick to react to even subtle movements.
Adjust the stick’s resistance according to your needs and preferences. The base is weighted, for enhanced stability during gaming sessions.

THE S.M.A.R.T (SLIDING MOTION ADVANCED RAIL TRACK) ADVANTAGE

The rudder system features four slide rails crafted of industrial-grade aluminum, for incredibly smooth sliding motion. The long range of travel on the rudder axis allows for an extremely high

degree of precision.
The rudder’s axis returns to the central position automatically, for the perfect balance between smoothness and resistance.

THRUSTMASTER FLIGHT SIMULATION ECOSYSTEM

The TFRP rudder system is a must-have for everyone who enjoys flight-themed games — including flight simulation fans.
The TFRP allows for a greater level of immersion: control the rudder and brakes with your feet, just like in real aircraft.

TWO DIFFERENTIAL BRAKE PEDALS FOR AN OPTIMIZED FLIGHT EXPERIENCE

The two differential brake pedals are suitable for most users, at 10 inches/25 centimeters long (12/45 shoe size).
The differential brake’s axis is identified by a grip on the rounded central pivot.
