Petlibro Dockstream cat drinker with app, 2.5L

Petlibro Dockstream is a 2.5-liter cat drinker that not only provides fresh water around the clock, but also allows you to remotely monitor your pet's hydration from the app. With advanced features and clear notifications, you can take care of your cat's health from anywhere - all you need is a phone and a Wi-Fi connection. This is a great solution for owners who want to make sure their pet is drinking enough water, even when they are away from home.

PawSense - hydration and health monitoring system

The built-in PawSense system analyzes how often, how much and when your cat drinks water. The data is saved in the app, so you can check whether your cat is drinking regularly and enough. If something deviates from the norm - for example, your pet suddenly stops drinking - you will receive

an alert. This is a good way to detect possible health problems early.

Real-time notifications

Thanks to the connection to the app, the device notifies you if the water level is low, if you need to clean or replace the filter. Alerts appear in real time on your smartphone, allowing you to react quickly and ensure your cat has constant access to clean water. The drinker works with a 2.4 GHz network (no support for 5 GHz).

2 flow modes and silent operation

There are two flow modes to choose from: continuous and intermittent. You can adjust them in the app to your cat's preference. This is a way to encourage your cat to drink more often, which is crucial for its health. Thanks to thoughtful water circulation, the drinker generates only 23 dB of noise. The device doesn't disturb household members and doesn't stress the cat, even during nighttime operation.

Effective filtration

The filtration system removes impurities, heavy metals and unpleasant odors. Four filter layers ensure that the water is always fresh and safe for the cat. It's a good idea to change the filter regularly, as the app reminds you.

Easy cleaning

You can remove the water tank from the drinker, which makes cleaning it much easier. The pump works wirelessly, so there is no risk of damaging the wires when cleaning. It is worth remembering that the base of the drinker is not waterproof and should not be washed under water.

Included

- drinker
- power supply
- power cable
