GODOX AK-R1 Accessory Kit for Round Heads

The Godox AK-R1 Magnetic Accessory Kit is a set of light modifiers designed for flash units with round heads. The set includes a dome diffuser, a diffuser plate, barn doors, a reflector, a honeycomb grid, a snoot, and an adapter with gel filters. The magnetic mounting system allows for quick accessory changes, and compatibility with Godox AD100Pro, H200R, V1, and R1 RGB strobes, as well as with news flash units equipped with the S-R1 adapter, means the kit offers extensive light-shaping capabilities during studio sessions, photojournalism assignments, and on-location work.

The magnetic mounting system makes work easier

The Godox AK-R1 was designed to allow for quick changes in lighting setups without interrupting your work. All components are attached using magnets, so mounting and dismounting them takes

just a few moments. Individual accessories can also be combined by stacking them to achieve even greater control over the nature of the light. This solution allows you to efficiently adapt the lighting to changing conditions and the needs of the shoot.

A set of modifiers for various lighting effects

Each element of the set serves a specific function and produces a different lighting effect. The dome diffuser evenly scatters light at an angle exceeding 180 degrees, making it softer and more natural, without distinct edges. The barn doors allow you to control the direction of light spread, making it easier to illuminate specific parts of the scene. The honeycomb grid narrows the light beam and creates a spotlight with smooth tonal transitions, providing greater precision during use.

Greater control over light and its color

The reflector included in the set has two sides for different applications. The white surface reflects light and gently illuminates the subject, brightening shadows when shooting with a ceiling bounce. The black side restricts light spread in a specific direction, allowing for better control over the scene's lighting. The adapter with included gel filters allows you to use filters that correct the color temperature of the light, making it easier to match the flash's light to the ambient lighting. The kit includes six filters designed for color temperature correction, while additional Godox V11C and V11T filter sets are available separately.

Snoot for Spot Lighting

A snoot is one of the most commonly used accessories for shaping light in portrait and studio photography. It allows you to direct light onto a specific part of the frame, making it easy to highlight a particular element of the composition. It works perfectly for lighting hair, details, or creating striking highlights that give photos a more dramatic character. When combined with the other modifiers in the kit, it offers even greater possibilities for creative lighting design.

Always Ready to Go

The entire kit comes in a practical carrying case that makes it easy to store and transport all the accessories. This ensures the light modifiers are properly protected and always kept in one place.
