GODOX V100 F Flash for Fujifilm

The Godox V100 F Flash for Fujifilm sets a new standard among news flash units, offering an impressive 100 Ws of power and a wide adjustment range from 1/1 to 1/256. This allows you to easily adjust the light intensity to suit any scene—from subtle fill light to a powerful main light during professional photo shoots. This model was designed with the most demanding photographers in mind—those who expect reliability, high performance, and full control over lighting both in the studio and on location.

Ready for the Most Demanding Shots

The Godox V100 F features a modern, highly responsive 2.3-inch color touchscreen that significantly speeds up setting adjustments. The intuitive menu allows you to instantly adjust flash power, switch between operating modes, activate additional features, or pair devices with a single touch. The flash also works with cameras equipped with a global shutter, supporting shutter speeds of up to 1/80,000

s and TTL auto mode. These capabilities make it ideal for sports photography, dynamic events, or shooting in direct sunlight, where both speed and precision matter.

Uncompromising creative freedom

An advanced cooling system allows for 70 to 100 full-power flashes (depending on the set focal length) without the risk of overheating, so you can shoot intensively even during long sessions. An additional, detachable flash module (featured on the V1 Pro model) allows you to simultaneously bounce the main head's light off the ceiling and illuminate the foreground, opening up new possibilities for portrait and event photography. The built-in LED modeling light with 10-step brightness adjustment makes it easy to assess the lighting effect before taking a photo, and can also serve as a subtle fill light when needed.

Long runtime and full integration with the Godox X system

The flash uses the same high-capacity battery as the Godox V1 Pro, delivering up to 400 full-power flashes on a single charge. You can conveniently charge the battery via the USB-C port or using the Godox VC26T charger (sold separately). Additionally, the V100 F is equipped with a connector for connecting the Godox PB960 external power pack (also sold separately), which reduces the flash's recharge time to just 0.8 seconds. The built-in Godox X 2.4 GHz transmitter and receiver allow you to control the flash from any Godox X system transmitter or use it as a master unit to control other flashes. The one-touch quick pairing feature simplifies integration with the Godox X3 trigger and other system devices, and compatibility with accessories such as the AK-R1, AK-R21, AK-R22, or the S2 Bowens modifier mount allows you to easily expand your kit with additional creative tools.

Included in the set

- Godox V100 F flash
- VB30 battery
- SU-1 module
- USB cable
- charger
- mini tripod
- carrying case
