GODOX ES30 E-sports LED Lighting Panel

The GODOX ES30 is a compact LED panel designed for streamers, online content creators, and live broadcasters. It offers smooth brightness adjustment with 1% precision or quick 10% increments, as well as adjustable color temperature ranging from 2800 K to 6500 K, allowing you to easily tailor the lighting to the nature of your content and the room conditions. The soft, even light enhances your on-camera appearance, reduces harsh shadows on your face, and makes your streams, online meetings, or recordings look more professional.

Comfortable lighting even during hours-long streams

The panel uses edge-lit technology, which provides softer and more even lighting than standard streaming lamps. As a result, the light remains sufficiently bright without being harsh on the eyes, which is especially important during long hours of work in front of a monitor. The soft lighting also helps create a natural-looking face, so viewers focus on the content being presented rather than on lighting imperfections.

Precise light control and complete creative freedom

Brightness adjustment allows you to fine-tune the light intensity with great precision, whether during daily streams or recordings that require perfect exposure. A color temperature range from 2800 K to 6500 K allows you to change the character of the lighting—from warm, cozy shots to cooler, more neutral light. This allows the panel to easily integrate into your existing lighting setup.

Quiet operation and convenient control via the app

The fanless design eliminates noise, making the panel ideal for streaming, podcasts, video recordings, and any situation where clear audio is essential. Control can be done directly from the device or remotely via the Godox Light app, available for iOS and Android. The group control feature allows you to manage the ES30 panel and other GODOX lights simultaneously or control them independently, making it easy to create consistent lighting for your entire setup.

Thoughtful design for compact setups

The swivel head allows you to easily adjust the light angle, and the panel’s slim design lets you make the most of even very limited space. The included telescoping desk mount makes it easy to install the panel between the desk surface and the wall, so it doesn’t take up valuable space on your workstation. This solution works well for professional live broadcasts as well as everyday video conferences or social media recordings.

Included:

- Lighting panel
- AC adapter
- Power cord
- Telescopic desk mount

Manufacturer	GODOX
Model	ES30 Kit1

Brightness control	1% / 10%
Color temperature	2800–6500 K
