Petlibro RFID smart food dispenser with collar, 3L

Peaceful feeding without competition between pets, support for specialized diets and freshness of every bite - now all this can happen automatically. Petlibro RFID is a 3L smart food dispenser that takes care of your pet's comfort and health even when you are not at home. Thanks to RFID technology, each cat or dog receives a meal tailored to its needs. The device automatically recognizes your pet thanks to the tag on its collar and opens the lid just for it. The app allows you to set a feeding schedule, record your own voice message, track eating habits and give the dispenser your pet's name. Emergency mode ensures reliability even without access to a power source.

Access only for the selected pet

The device provides personalized and safe feeding for pets that consume veterinary food, take medications or have specialized dietary needs. Now, even when caring for several pets, you can safely use different diets in one house - each will eat exactly what it should. How it works. The dispenser recognizes the pet thanks to an RFID tag attached to the collar and opens the bowl lid only when the assigned pet approaches. This solution also eliminates the problem of snacking and aggression between pets. Note: each device syncs with only one RFID tag.

Secure collar with QR code

The included RFID collar is equipped with a quick release system, which increases your pet's safety if it gets caught in an obstacle. In addition, it includes a QR code with your contact information - if your pet gets lost, the finder can easily contact you.

Comfort during meals

Thanks to the side covers and lockable bowl, each pet is provided with a private space to eat. This helps eliminate stress and competition between pets. Meals become calmer and healthier - physically and emotionally. The bowl offers adjustable opening speed and the ability to set the closing delay time (from 1 to 10 seconds). This allows you to adjust its operation to the pace at which your pet eats - without rushing or stressing.

Food freshness

A system consisting of five layers of freshness protection takes care of the quality of the food inside. The lid of the container is tightly sealed, silicone seals and a rotor prevent air from entering, and an additional moisture-absorbing bag keeps the food in perfect condition for a long time. The Petlibro dispenser works with dry, freeze-dried, air-dried and mixed feed - but its diameter must be between 2 and 15 mm.

Everything under control with the app

With the app, you can schedule feedings, change bowl settings and receive data on when and how much your pet has eaten. PawSense™ monitors eating habits and shows you the average time and frequency of meals - all so you can notice any changes in your pet's habits faster. From it, you'll also

record a voice message to be played at mealtimes and make your pet's name or emoticon appear on the LED screen. You can share access to the app with up to 5 people. This allows each household member or caregiver to help take care of your pet when you're at work, on vacation or just busy.

Reliable operation

Thanks to battery power (3 D-type batteries), the device also works during power failures. Scheduled feedings are carried out on schedule - even if you temporarily run out of Wi-Fi connection or the device runs in battery mode. Note: batteries are not included. In battery mode, the Wi-Fi function does not work - feeding is carried out according to the previously saved schedule.

Included:

- Smart food dispenser
- Steel feeding bowl with handle
- Side covers for the bowl x2
- Bowl cover
- RFID tag collar
- RFID reader
- Drying bag
- AC adapter
- User manual
