The reduction is only one-way, i.e. HDMI to VGA converter, not the opposite way.

The converter includes a stereo output (3.5mm jack) for connecting headphones or active speakers. Audio output can be set to 32 / 44.1 / 48 kHz at 16 or 24bit.

Thanks to the built-in microUSB connector for additional charging, the adapter can also be connected to devices with weaker HDMI output power levels such as Raspberry Pi, Apple TV, some Smart TV boxes and more. No additional power is needed when connecting to a desktop PC or laptop.

Input:

- HDMI v1.4b digital interface
- HDMI A (M) male

Output:
